The present sequence is an alternative version of a cDNA encoding 27875 protein, a human ADAM-TS (a disintegrin and metalloproteinase).
Metalloproteinase is a proteolytic enaryme involved in protein and tax and acturation, protein degradation, tumour growth, metastasis and anturation, protein degradation, tumour growth, metastasis and antibodies are useful for preventing, diagnosing and treating 27875 metalloproteinase-related disorders. These disorders involving the lung such as congenital anomalies, bronchial asthma, Goodpasture's syndrome, pulmonary alveolar proteinosis, disorders involving the skeletal muscle include tumours such as hypertension, alsorders involving blood vessel such as hypertension, athorized and sport of disorders involving blood vessel such as horspecific epididymitis and corchits, gonorrhea, mumps, tuberculosis and syphilis, spermatocytic seminoma, disorders involving the kidney such as membranoproliferative scenosis, chronic glomerulonephritis, slokie cell disease nephropathy, urberculous osteomyelitism, osteomalacia, osteomalacia, osteomalacia, cuberculous osteomyelitism, osteoma, osteomalacia, chronic thymus such as thymic cysts, thymic hypoplasia, Human, ADAM-TS; A Disintegrin And Metalloproteinase; antiinflammatory; analydenesis; bronchial asthma; Goodpasture's syndrome; metastasis; heart failure; cardiac hypertrophy; chronic ischaemic heart disease; sickle cell disease nephropathy; urinary tract obstruction; haemostatic; skeletal muscle disorder; myocardial infarction; blood vessel disorder; hypertension; atherosclerosis; vsculltis; renal artery stenosis; gnorrhea; tuberculosis; syphilis; spermatocytic seminoma; osteoporosis; rhabdomyosarcoma; glomerulonephritis; bone disorder; paget's disease; rickets; osteomalacia; Hodgin's disease; gene therapy; artibacterial; cardiant; tumour; thymoma; vasotropic; cytostatic; virucide; ss. Novel isolated polypeptide, 27875, a human ADAM-TS (a disintegrin and metalloproteinase) useful for diagnosis and treatment of disorders of bone, lung, heart, skeletal muscle such as osteoporosis, emphysema, /product= "Human mature 27875 ADAM-TS protein" /product= "Human 27875 ADAM-TS protein" /transl\_except= (pos:1821..1823, aa:Xaa) /note= "Xaa is an unknown amino acid" Claim 7; Page 115-123; 133pp; English. This invention describes a novel metalloprotease containing a associated disease including rheumatoid arthritis and osteoarthritis. The products of the invention have osteopathic, aniarthritis, antiproducts of the invention have osteopathic, aniarthritic, antiproducts of the invention have osteopathic, aniarthritic, antiproducts of an arthritis, MPTS may be used to identify a modulator of its activity, e.g., an agonist or antagonists. Such compounds, as well as MPTS itself may be used to treat disease associated with MPTS activity or aggreean degradation, particularly osteoarthritis, rheumatoid arthritis, psoriasis, spondylitis, sport injury, joint trauma or fibrosis. This sequence encodes the human MPTS-19 metalloprotease described in the method of the invention. 1019 ACACIGCCAICCTGCTCACCAGAA.....AGGACCTGTGT 1053 958 AGCTICIGCAAGIGGCAGAAAAGCAICAACAIGAAGGGGGGAIGCCCAICC 1007 102 ProArgProGlnThrSerProGluThrLeuProLeuTyrArgThrGlnSe 118 118 rArgGlyArgGlyGlyProLeuArgGlyProAlaSerHisLeuGlyArgG 135 908 ATGAGGAGGAGGACCTAAAGATCACGCACCATGCAGAACAACACCCCGAAG 957 85 roProArgProProArgHisProGluAlaLeuLeuProArgGlyGlnGly 101 708 TCTACACCAGCGGTCGGTCAGCAAAGAGAAGTGGGTGGAGACCCTGGTGG 757 758 TAGCTGATGCCAAAATGGTGGAGTACCACGGACAGCCGCAGGTTGAGAGC 807 808 TATGTGCTGACCATCATGAACATGGTGGCTGGCCTGTTTCATGACCCCAG 857 858 CATTGGGAACCCCATCCACATCACCATTGTGCGCCTGGTCCTGCTGGAAG 907 50 61 lyvalGlyval.....Gln 65 82 24 pGlnGluValLeuSer.....GlyHisSerLeuGlnT 35 35 hrProThrGluGluGlyGlnGlyProGluGlyValTrpGlyProTrp... 50 .....ValGlnTrpAlaSerCysSerGlnProCysG 61 66 ArgargSerArgThrCysGlnLeuProThrValGlnLeuH1sPro.... 80 Sequence 5338 BP; 974 A; 1825 C; 1638 G; 901 T; 0 other; .....SerLeuProLeuP 15 LeuLeuSerLeuProGlnLeuCys.....LeuAs Gaps: 41 Percent Identity: 27.946 Length: to: 5338 Claim 1b; Page 39-43; 66pp; German from: 1 804.50 1.808 46.403 Align seg 1/1 to: AAH49372 alignment\_block: US-10-041-770-2 x AAH49372 alignment\_scores: Quality: Percent Similarity: Ratio: 51 81

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence encodes a disintegrin and metalloprotease (ADAM) type metal protease designated MYDS2, isolated from human. MDTS proteins have cytostatic and antiarthrilic activities. They can be used as a drug for cancers, arthritis and arthrosis deformans.
                                                                                                                                                                                                                                                                                                                                                           for use as a drug for

ADAMTS-E is a splice protease containing a thrombospondin domain. ADAMTS-E is a splice variant of ADAMTS-E DAMTS-E is a subject relative to disease or susceptibility to a disease in a subject relative to expression or activity of ADAMTS-E in a subject relative to expression or activity of ADAMTS-E in a subject. ADAMTS-E and the splice variant may be used in the treatment of osteoarthritis and the splice variant may be used in the treatment of osteoarthritis and the application or activity of ADAMTS-E in a subject. ADAMTS-E and the splice variant may be used in the treatment of osteoarthritis and the application, activity and rejection, activity and rejection, achieved a sistensial point implants, atherosclerosis, actions, restenosis, periodontal disease, epidermolysis bullosa, osteoporosis, consenting of artificial joint implants, atherosclerosis, actions stroke, anciental head trauma, splnal cord injury, neurodegenerative disease, autoimmune disorders, Huntington's disease, Parkinson's disease, autoimmune disorders, Huntington's disease, parkinson's disease, autoimmune depression, peripheral neuropathy, pain, cerebral dasease, migraine, depression, peripheral solerosis, multiple sclerosis, coular angiogenesis, corneal contains, the pain and period and period healing, burns, infertility
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polynucleotide encoding ADAMTS-E, a disintegrin and metalloprotease containing thrombospondin domain, and ADAMTS-E2 polypeptide useful for treating cerebral ischemia, osteoporosis, cachexia, allergies and asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            789 caggccccriggggaargaa..... 808

                                                                                                                                                                                                                                                                                                                                           655
                                                                                                                                                                                                                                                                                                                                                                                                            52
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to murine and human ADAMTS-N (A disintegrin-like and metalloprotease domain with thrombospondin type I motifs) proteins, designated ADAMTS-5, 6, 7, 8, 9, 10 and R1. Also included in the invention are cDNA sequences encoding the proteins, and antibodies specific for the proteins. The nucleic acid sequences and proteins may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate ADAMTS-N expression. Disorders that may be treated using the nucleic acids, proteins and antibodies include, for example tumour cachexia, inflammation, deramatosparaxis in cattle or Ehlers-Danlos syndrome type VIIC (EDS-VIIC) in humans, erosion of articular cartilage and incembryogenesis, tumour growth and metastases, and they may also be used for controlling embryogenesis and implantation of fertilised eggs. The present sequence represents cDNA encoding human ADAMTS-10.
                                                                                                                                                                                                                                                                                                                                        ADAMTS-N; disintegrin; metalloprotease; thrombospondin type I motif; tumour cachexia; inflammation;, dermatosparaxis; EDS-VIIC; angiogenesis; Ehlers-Danlos syndrome type VIIC; articular cartilage erosion; human; metastasis; embryogenesis; egg implantation; ADAMTS-10; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Murine and human 'A Disintegrin-like And Metalloprotease domain with ThromboSpondin type I motifs' proteins and the nucleic acids encoding them, useful for treating e.g. tumours, inflammation and arthritis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 3885 BP; 795 A; 1209 C; 1172 G; 707 T; 2 other;

```
The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligor-off primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to sequence complementary to objunucleotide which comprises a 3'-end sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; primer; detection; diagnosis; antisense therapy; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                                                                                                                                                                                                seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqn-embl/NA2001A.DAT:AAH16636

the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cONAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cONAs. The primers allow obtaining of the full-length cONAs asily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH13642 to AAH13632 to AAH36593 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       658
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                658 gThrProLeuGlySerProAlaAlaTyrTrpLysArgValGlyHisSerA 675

This invention relates to murine and human ADAMTS-N (A disintegrin-like and metalloprotease domain with thrombospondin type I motifs) proteins, designated ADAMTS-S, 6,7,8 g, 10 and RI. Also included in the invention are cDNA sequences encoding the proteins, and antibodies specific for the proteins. The nucleic acid sequences and proteins may be used in the prevention, dasquases and reatment of diseases associated with inappropriate ADAMTS-N expression. Disorders that may be treated using the nucleic acids, proteins and antibodies include, for example timing the nucleic acids, proteins and antibodies include, for example timing the vIIIC (EDS-VIIC) in humans, erosion of articular cartilage in arthritic (both inflammatory and non-inflammatory) disease, and they may also be used for controlling embryogenesis and implantation of fertilised eggs. The present sequence represents CDNA encoding human ADAMTS-10.
                                                                            Murine and human 'A Disintegrin-like And Metalloprotease domain with Thrombospondin type I motifs' proteins and the nucleic acids encoding them, useful for treating e.g. tumours, inflammation and arthritis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   roProArgProArgHisProGluAlaLeuLeuProArgGlyGlnGly 101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     942

The invention relates to an isolated, enriched, or purified protease polypeptide (I) and polynucleotide (II) encoding (I). (I) may be used to screen for substances (S) that may modulate its activity. Administering (S) which modulates protease activity in vitro) may be used to treat a disease or disorder selected from cancers (e.g., of tissues, of blood or haematopoleitic origin, of the breast, colon, lung, prostrate, cervical, brain, ovarian, bladder or kidney), immune related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases (e.g., central or peripheral nervous system diseases, migralne, pain, sexual dysfunction, mood disorders, britchic disorders, nypotension, hypertension, psychotic disorders, neurological disorders and dyskinesias), metabolic disorders and inflammatory disorders uch as those above. AAS97159-AAS97155 represent human protease coding sequences and primers of the invention. Claim 30; Figure 11-J; 232pp; English.

Sequence 2805 BP; 745 A; 677 C; 733 G; 650 T; 0 other;

Group. Further information can be found at http://www.sanger.ac.uk/RGP/Chrl
RPI1-5444 is from the library RPC1-11.1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
PGCTOR: PBACG3.6
IMPORTANT: This sequence is not the entire insert of clone RPI1-5444 It may be shorter because we sequence overlapping sections only once, except for a short overlap.
The true left end of clone RPI1-5444 is at 1 in this sequence. The true left end of clone RPI1-353122 is at 174551 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    79903 CCCTTTCATCTCCCCCTAGGCTCCCACCCCATCTCCCAGGCCACGCCTC 79952

On Feb 1, 2002 this sequence version replaced gi:18250/48.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmed subclone or more than one Mis subclone or more than one Mis subclone or more than one Mis subclone assembly was confirmed by resolved all sequencing problems; such a change that the more Mis subclone state that which their source databases: Em; EMBL; Sw; SWISSPROT; Tr:, TREMBL; WP:, WORMPEP; Information on the WORMPEP database can be found a more database made to associate primary accession mumbers given database can be found a more database.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AL356356 bp DNA linear PRI 30-JAN-2002 Human DNA sequence from clone RPI1-54A4 on chromosome 1, complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Homo sapiens

It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     OK 73019, USA

It currently consists of 10 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         25.88: contig of 25.28 bp in length 26.28: gap of unknown length 83.57: contig of 56.29 bp in length 83.57: contig of 56.29 bp in length 140.71: contig of 57.74 bp in length 141.71: gap of unknown length 1826.7: contig of 13.996 bp in length 2826.7: gap of unknown length 410.90: contig of 1282.3 bp in length 410.90: contig of 1282.3 bp in length 58.58: gap of unknown length 58.58: gap of unknown length 83.163: contig of 24.05 bp in length 10.770: gap of unknown length 10.770: gap of unknown length 10.770: gap of unknown length 13.7148: contig of 24.107 bp in length 13.7148: contig of 25.78 bp in length 13.7148: gap of unknown length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This is a 'working draft' sequence. It currently consists of 37 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                       Center: Washington University Genome Sequencing Center
Center code: WUGSC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  bp in length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1, A Sequence 3, A Sequence 1, Sequence 1, Sequence 6, A Sequence 6, A Sequence 8, A Sequence 12, Sequence 12, Sequence 11, Se

Xhol-oligo(dT) primer [5'GGAGGACTGGAGGGGCGGGAGGAGGT)VN
3'; V=A,C,G,T] and then dG tailed. Second strand
was primed with a BamH1-dC primer
[5'AGAGGCTGGACCGGGCGGGCATAATAATAATAAT(C) 3'].
[5'AGAGGCTGGACTCGGGGCCGGATAATAATAATAAT(C) 3'].
Double-stranded cDNA was then digested with BamH1 and XhoI
and directionally cloned into the BamH1 and SalI sites of
lambda pSB vector. Library went through one round of
normalization. Library was constructed by Wei Yu at RIKEN
of Japan (Carninci P, Westover A, Nishiyama Y, Ohsumi T,
Itoh M, Nagaoka S, SasakiN, Okazaki Y, Mutamatsu M,
Schneider C, Hayashizaki Y, High efficiency selection of
full-length cDNA by improved blotinylated cap trapper.,
DNA Res 4:1, 61-6, Feb 28, 1997)"
